AuditMind — Master Step-by-Step Prompt Playbook

Complete Turn-by-Turn Execution Guide to Unlock Full Agent Potential in Live Demos

How to use this playbook: Start AuditMind locally using `npm run cli` or in Band Desktop (`npm run band`). Follow the exact prompt sequence below turn-by-turn. Each step demonstrates a specific high-value capability evaluated under the 5 hackathon judging criteria.

Step	Capability Demonstrated	Persona	Judging Criteria Addressed
1	Human-like Warm Greeting (2-line, no robotic filler)	Arjun	User Experience (15%)
2	Smart Batched Intake (asks all fields at once)	Arjun	User Experience (15%)
3	The 'Before' Shot: Stateless LLM Baseline	Meera	Hindsight Memory (25%)
4	The 'After' Shot: Historical Audit Reflection	Meera	Hindsight Memory (25%)
5	Outcome Learning: 'Never Suggest a Failed Fix'	Arjun	Innovation (30%)
6	Live Outcome Ingestion: Continuous Learning	Arjun	Technical Implementation (20%)
7	Cross-Outlet Pattern Discovery (Single Bank)	Arjun	Innovation (30%) / Memory (25%)
8	Executive Synthesis: Group Risk Briefing	Meera	Real-World Impact (10%)

STEP 1: HUMAN-LIKE WARM GREETING | *User Experience (15%)*

Speaker Persona: Arjun | **Setup Command:** `/as Arjun`

COPY & PASTE PROMPT:

```
> hi
```

AGENT RESPONSE & BEHAVIOR:

Warm, natural 2-line greeting introducing AuditMind and food-safety assistance. Triggers zero tool calls; avoids robotic phrases ('Certainly! How may I assist you today?').

■ **PRESENTER TALKING POINT:** *"Notice the response: concise, warm, natural, and completely free of canned robotic filler."*

STEP 2: SMART BATCHED INTAKE | *User Experience (15%)*

Speaker Persona: Arjun

COPY & PASTE PROMPT:

```
> fridge is warm at Koramangala
```

AGENT RESPONSE & BEHAVIOR:

Agent does NOT call a tool prematurely or badger the user across multiple turns. It requests all missing data at once: (1) Equipment type, (2) Exact temperature reading in °C, (3) Recording staff name & shift.

■ **PRESENTER TALKING POINT:** *"Instead of logging incomplete data or asking 3 separate questions across 3 turns, AuditMind batches all required fields in one clean prompt."*

STEP 3: THE 'BEFORE' SHOT (STATELESS BASELINE) | *Hindsight Memory (25%)*

Speaker Persona: Meera | **Setup Command:** `/as Meera --> /memory off`

COPY & PASTE PROMPT:
```
> Is Koramangala ready for Friday's audit?
```

AGENT RESPONSE & BEHAVIOR:
Standard generic checklist: 'Ensure fridges are <=5 deg C with 3 daily checks, pest logs are signed, raw/cooked foods segregated.' Zero knowledge of Koramangala's real history.

■ **PRESENTER TALKING POINT:** *"Look at this answer: it's textbook advice. The agent has no memory of what actually occurred at Koramangala."*

STEP 4: THE 'AFTER' SHOT (MEMORY REFLECTION) | *Hindsight Memory (25%)*

Speaker Persona: Meera | **Setup Command:** `/memory on`

COPY & PASTE PROMPT:
```
> Is Koramangala ready for Friday's audit?
```

AGENT RESPONSE & BEHAVIOR:
Triggers [hindsight:REFLECT]. Highlights:
• 8 past morning fridge breaches (thermometer swap failed; marination move to reach-in 2 succeeded).
• 6-day pest log gap during Ayudha Puja week (a repeat finding from March client audit).
• FreshCo warm chicken delivery accepted by night staff.
• Prescribes exact 7-day post-fix temperature verification logs to hand to the auditor.

■ **PRESENTER TALKING POINT:** *"With Hindsight turned ON, the response completely transforms. It identifies the real failure modes, cites previous audit citations, and prepares the team with specific documentation."*

STEP 5: OUTCOME LEARNING ('NEVER SUGGEST A FAILED FIX') | *Innovation (30%)*

Speaker Persona: Arjun | **Setup Command:** `/as Arjun`

COPY & PASTE PROMPT:
```
> Walk-in fridge read 7.1°C this morning. What should we do?
```

AGENT RESPONSE & BEHAVIOR:
Logs breach (7.1°C vs ≤5°C limit). Recalls fix outcomes: explicitly notes replacing the thermometer previously DID NOT WORK. Recommends checking if morning marination was put in the walk-in with the door open, and moving it to reach-in fridge 2.

■ **PRESENTER TALKING POINT:** *"A standard bot would repeat generic advice like 'check your thermometer.' AuditMind remembers that replacing the thermometer already failed, directing the manager straight to the real operational solution."*

STEP 6: LIVE OUTCOME INGESTION (CONTINUOUS LEARNING) | *Technical Implementation (20%)*

Speaker Persona: Arjun

COPY & PASTE PROMPT:
```
> We moved the marination trays to reach-in 2 and closed the door. Temperature is now 3.8 deg C. The fix worked.
```

AGENT RESPONSE & BEHAVIOR:
Watch colored [hindsight:RETAIN] trace appear. Agent confirms: 'Outcome recorded -- the fix moved marination trays to reach-in 2 at Koramangala WORKED. Temperature 3.8 deg C is within safe limit (<=5 deg C). Future advice will factor this in.'

■ **PRESENTER TALKING POINT:** *"Look at the green retain trace: AuditMind has just committed this verified outcome into long-term memory. It gets smarter with every interaction."*

STEP 7: CROSS-OUTLET PATTERN DISCOVERY | *Innovation (30%) / Memory (25%)*

Speaker Persona: Arjun

COPY & PASTE PROMPT:
```
> FreshCo chicken delivery just arrived at 8.1°C, Imran accepted it on night shift
```

AGENT RESPONSE & BEHAVIOR:
Logs breach (8.1°C vs ≤5°C). Cross-site correlation: reveals FreshCo has had 5 warm deliveries across Indiranagar, Koramangala, and HSR Layout since shifting to night slots; 4 accepted by night staff ('driver in a hurry'). Advises isolating stock and notifying Meera.

■ **PRESENTER TALKING POINT:** *"Each outlet only saw 1 or 2 warm deliveries as isolated incidents. Because AuditMind uses one shared memory bank, it immediately connects the dots across all three outlets."*

STEP 8: EXECUTIVE SYNTHESIS (GROUP RISK BRIEFING) | *Real-World Impact (10%)*

Speaker Persona: Meera | **Setup Command:** `/as Meera`

COPY & PASTE PROMPT:
```
> weekly risk briefing
```

AGENT RESPONSE & BEHAVIOR:
Synthesizes group root causes via [hindsight:REFLECT]:
1. Supplier logistics: FreshCo late-night delivery timing breaches cold-chain.
2. Staff discipline: Night-shift receiving staff bypass temperature rejection rules.
3. Outlines 3 strategic actions: supplier contract review, night-shift retraining, and pest log audit.

■ **PRESENTER TALKING POINT:** *"Nobody ever entered 'night-shift receiving is the root cause' into the system. AuditMind synthesized that strategic insight from weeks of checks stored in Hindsight."*

FAST-COPY CHEAT SHEET FOR PRESENTATIONS:
```
1. /as Arjun > hi
2. fridge is warm at Koramangala
3. /as Meera > /memory off > Is Koramangala ready for Friday's audit?
4. /memory on > Is Koramangala ready for Friday's audit?
5. /as Arjun > Walk-in fridge read 7.1°C this morning. What should we do?
6. We moved the marination trays to reach-in 2 and closed the door. Temperature is now 3.8°C. The fix
worked.
7. FreshCo chicken delivery just arrived at 8.1°C, Imran accepted it on night shift
8. /as Meera > weekly risk briefing
```
